## ABSTRACT OF THE DISCLOSURE

A method for the mechanical working of metals and alloys which comprises conducting the mechanical working in the presence of an aqueous cooling lubricant having a pH of 6-10 and containing a phosphate ester of the formula

 $R_1(oxyalkylene)_nOP(O)(X)(OH)$  (I), or

 $(HO)_2(O)P-(oxyalkylene)_m-OP(O)(OH)_2$  (II),

where  $R_1$  is an alkyl group with 1-12 carbon atoms, oxyalkylene is a group containing 2-4 carbon atoms, n is a number from 1-20, X is hydroxyl,  $R_1O$  or  $R_1(\text{oxyalkylene})_nO$ , where  $R_1$ , oxyalkylene and n have the meanings mentioned above, and m is a number from 4-40, or a salt thereof, and an alkenyl substituted succinic acid of the formula

HOOCCH(R2)CH2COOH (III),

where  $R_2$  is an alkenyl group with 4-10 carbon atoms, or a salt thereof, or a mixture of any of the compounds I, II and III.
